Synthase

From Wikipedia, the free encyclopedia

In biochemistry, a **synthase** is an enzyme which catalyzes a synthesis process. Following the EC number classification, they belong to the group of Lyases, catalysing the reverse reaction. In contrast to synthetases, they do not use ATP.

Examples

- ATP synthase **EC** 3.6.3.14.
- Citrate synthase \(\begin{aligned} \text{\text{\$\cdot 2\$}} & \begin{aligned} \text{\$\cdot 2\$} & \begin{aligned} \text{\$\cdot 3\$} & \begin{aligned} \text{\$\cdot 2\$} & \begin{aligned} \text{\$\cdot 2\$} & \begin{aligned} \text{\$\cdot 3\$} & \begin{aligned} \text{\$\cdot 2\$} & \begin{aligned} \text{\$\cdot 3\$} & \begin{aligned} \text
- Tryptophan synthase € \ 4.21.20
- Pseudouridine synthase
- Fatty acid synthase
